

**Raltus**  
SOFTWARE

**RALTUS SOFTWARE ANNOUNCE THAT THE NEW DEFECTS MANAGEMENT AND TRACKING MODULE HAS NOW BEEN ADDED TO THEIR AWARD WINNING PROCEDURECAPTURE SOLUTION AND IS NOW AVAILABLE ON GENERAL RELEASE.**

*Belfast, Ireland - February 2016*

Raltus Software's ProcedureCapture tool helps deliver faster, cheaper and better quality validation in FDA/EU regulated industries.

Raltus software have over 80 life-sciences customers including Aspen Global, Sonexus Health, Kythera and Biocartis.

The new Defects Management and Tracking module is now on general release and it includes the following :

- **Risk Based Priority Defect Management** - traces the Defect risk priority back through the Tests and back to the Requirements which means you can see which are the most important defects to fix first.
- **Defect tracking** – allows the complete tracking of a Defect throughout its lifecycle and gives the whole team transparency of its status.
- **Traceability of a Defect to the actual Test script execution** - allows you to see at a step level the expected/actual visual storyboard of execution and therefore the exact steps needed to accurately replicate the fault.

ProcedureCapture is the only solution which generates conclusive and indisputable documented evidence and uses a single license for the whole lifecycle of :

- **Requirements Management.**
- **Risk Assessment.**
- **Test Script Capture.**
- **Review and Pre Approval of Scripts.**
- **Paper and Paperless execution.**
- **Manual or Automated testing with Electronic Signatures.**
- **Defect Management and Tracking.**
- **Trace Matrices and generation of documented evidence.**
- **End user guides and training materials.**

"ProcedureCapture helps companies significantly reduce the cost and resource burden of testing their applications and this directly translates into a 40% decrease in the time to create test scripts and a 60% decrease in time to execute these scripts".
